

PCEP-30-0x: Certified Entry-Level Python Programmer Practice Questions

This document contains 100 practice questions designed to help you prepare for the PCEP certification, covering basic concepts, data types, operators, control flow, collections, and functions.

No.	Question	Correct Answer
1	What is the output of <code>print(2 ** 3)</code> ?	8
2	Which function is used to get the length of a list?	<code>len()</code>
3	What is the result of <code>10 // 3</code> ?	3
4	How do you start a comment in Python?	#
5	What is the output of <code>bool(0)</code> ?	False
6	Which keyword is used to define a function?	<code>def</code>
7	What is the output of <code>print("a" + "b")</code> ?	ab
8	Is Python case-sensitive?	Yes
9	What is the result of <code>7 % 2</code> ?	1
10	Which data type is result of <code>1 / 1</code> ?	float
11	How do you create a list in Python?	Using square brackets <code>[]</code>

No.	Question	Correct Answer
12	What is the output of <code>print(type(5))</code> ?	<code><class 'int'></code>
13	Which operator is used for equality?	<code>==</code>
14	What is the output of <code>print(3 * '3')</code> ?	333
15	What keyword is used for 'else if'?	<code>elif</code>
16	What is the default return value of a function?	None
17	Can a tuple be modified after creation?	No
18	Which function reads a string from input?	<code>input()</code>
19	What is the index of the first element in a list?	0
20	What is the output of <code>2 + 3 * 4</code> ?	14
21	What does the 'break' statement do?	Exits the current loop
22	How do you define a dictionary?	Using curly braces <code>{}</code>
23	What is the result of <code>"Python"[0]</code> ?	P
24	Which method adds an element to the end of a list?	<code>append()</code>

No.	Question	Correct Answer
25	What is the logical 'and' of True and False?	False
26	Which function converts a string to an integer?	int()
27	What is the output of print(not True)?	False
28	How do you start a 'while' loop?	while condition:
29	What is a literal?	A notation for representing a fixed value
30	Can list elements be of different types?	Yes
31	What is the result of range(3)?	0, 1, 2
32	Which operator is used for multiplication?	*
33	What does 'continue' do?	Skips to the next iteration of a loop
34	What is the output of 2e3?	2000.0
35	Which keyword is used for loops over a sequence?	for
36	What is the output of print(5 == 5.0)?	True
37	What is the result of 'abc' * 2?	abcbac

No.	Question	Correct Answer
38	How to check if a key is in a dictionary?	Using 'in' operator
39	What is an identifier?	A name used to identify variables, functions, etc.
40	What is the output of 10 / 2?	5.0
41	What is the PEP 8?	Python Enhancement Proposal for coding style
42	What is the result of 2 != 3?	True
43	Which function returns a float?	float()
44	What is the output of bool([])?	False
45	What is the result of range(1, 5)?	1, 2, 3, 4
46	How to remove an item by value from a list?	remove()
47	What is the output of print(round(2.6))?	3
48	Which keyword starts a conditional block?	if
49	What is a docstring?	A string used to document a function/class
50	What is the result of [1, 2] * 2?	[1, 2, 1, 2]
51	Which method returns all	keys()

No.	Question	Correct Answer
	keys in a dict?	
52	What is the output of abs(-5)?	5
53	Can you use spaces for indentation in Python?	Yes (preferred)
54	What is the result of 2 ** 0?	1
55	Which keyword is used for 'or' logic?	or
56	How to declare a global variable?	global keyword
57	What is the output of print(True + True)?	2
58	What does list slicing [:] do?	Creates a shallow copy
59	What is the result of min(10, 5, 20)?	5
60	How to convert a list to a tuple?	tuple()
61	What is the output of print("Hi"[-1])?	i
62	What is the bitwise AND operator?	&
63	Which function outputs text to console?	print()
64	What is the result of 1 == 1.0?	True

No.	Question	Correct Answer
65	What is the character escape for newline?	\n
66	How do you define a block of code?	Indentation
67	What is the output of print(3 < 5 < 7)?	True
68	Which operator is used for subtraction?	-
69	What does the 'pass' keyword do?	Does nothing (placeholder)
70	What is the result of 0.1 + 0.2 == 0.3?	False (due to floating point)
71	How to find the max value in a list?	max()
72	Which method removes the last item from a list?	pop()
73	What is the output of "hi".upper()?	HI
74	What is the result of 5 >= 5?	True
75	How to define a multi-line string?	Triple quotes (''' or ''')
76	Which function sorts a list in place?	sort()
77	What is the bitwise OR operator?	

No.	Question	Correct Answer
78	What is the output of <code>print(2 * 3 + 1)</code> ?	7
79	What keyword is used for 'not equal'?	<code>!=</code>
80	Can strings be sliced?	Yes
81	How do you import a module?	<code>import</code> keyword
82	What is the output of <code>print(range(5)[-1])</code> ?	4
83	Which operator is used for floor division?	<code>//</code>
84	What is the result of <code>hex(16)</code> ?	<code>0x10</code>
85	What is the output of <code>str(10)</code> ?	<code>'10'</code>
86	How to add an item to a dictionary?	<code>dict[key] = value</code>
87	What is the output of <code>4 % 2</code> ?	0
88	Is 'in' a membership operator?	Yes
89	What does 'is' operator check?	Object identity
90	What is the output of <code>print(2 << 1)</code> ?	4
91	Which function returns an iterator?	<code>iter()</code>

No.	Question	Correct Answer
92	What is the result of <code>bool("False")</code> ?	True
93	How to check the data type of x?	<code>type(x)</code>
94	What is the bitwise NOT operator?	<code>~</code>
95	What is the output of <code>list(range(2))</code> ?	<code>[0, 1]</code>
96	Can you use a float as a list index?	No
97	Which keyword is used for 'return'?	<code>return</code>
98	What is the output of <code>print(chr(97))</code> ?	a
99	What does <code>"%.2f" % 1.2345</code> do?	Formats to 1.23
100	What is the output of <code>print(sum([1, 2, 3]))</code> ?	6
